STEP 6: Care for Wounds

Authors: Linda F. Lehman, Mary Jo Geyer and Laura Bolton

Photo credit: Tom Bradley
Introduction

A wound is an injury or break in the skin or nail, including cracks and blisters. It is important to heal a wound as quickly as possible because it is an entry point for dirt and germs. When the wound is at or near a joint, special actions may be needed to preserve movement. Good wound care helps wounds heal quickly and prevents complications such as infection, pain and movement limitations. Moisture-retentive dressings speed healing and reduce pain and incidence of infection in chronic and acute wounds. This helps to preserve limbs and mobility, leading to improved participation and quality of life.

The purpose of this step is to provide basic training for the management of simple, uncomplicated wounds at the community level. Large or complicated wounds require advanced wound management and should be referred.

Goal

Practice wound care that aids in healing, prevents complications and improves quality of life.

Key Messages

1. Wounds will heal more quickly and with fewer problems if the six basic principles of wound management are applied during daily wound care.
2. Moisture-retentive dressings speed healing, reduce pain and reduce incidence of infection in chronic and acute wounds.
3. Keep dressing as clean and as dry as possible during bathing and other daily activities; change if wet.
4. Exercises and movement can be done when there is a wound, but movement is restricted for approximately 7-10 days after skin grafting.
5. Contact your community health worker if you notice these situations: excessive fluid soaking through wound dressing; or increased bad odor, pain, swelling, wound size, warmth or fever.
6. Handle and dispose of contaminated material safely.

Guidelines for Teaching the Module
Health Coach/Facilitator should use the local language and ensure that all terms are found in the local language.

Estimated time: 4–6 hours

Learning Objectives
At the end of the module, participants will be able to:

1. Explain each of the six basic principles of good wound care:
   • Control underlying health conditions and/or diseases
   • Protect the wound and surrounding skin from physical or chemical injury
   • Keep the wound moist (not too wet and not too dry)
   • Keep the wound and surrounding skin clean, remove dead skin and tissues, and treat infection when needed
   • Control or reduce swelling to decrease pain, improve healing and preserve movement
   • Preserve skin and joint movement
2. Identify common problems contributing to delayed wound healing
3. Demonstrate how to change a wound dressing including removal of old dressing, cleaning the wound, applying a new dressing and securing dressing with a bandage
4. Identify actions to prevent loss of movement during wound healing
5. Explain ways to protect yourself and control infection; e.g., wash hands, safe handling and disposal of contaminated material.

List of Teaching Activities and Learning Materials

Activity 1
Wound Screening

Activity 2
Principles and Actions for Wound Screening

Activity 3
Steps for Wound Dressing Change and Wound Dressing Dramatization

Activity 4
Correct Wound Dressing Simulation

Activity 5
Practice Bandaging Hands & Fingers and Feet & Toes

Activity 6
Identifying Ulcer Type, Wound Management and Prevention of its Reoccurrence

Handouts
• 6.1 Instructions for Screening Wounds
• 6.2 Individual Impairment Record Form (IIRF)-Wound Section
• 6.3 Community Wound Care or Referral
• 6.4 Scenarios for Wound Care Screening and Recording
• 6.5 Principles and Actions to Improve Wound Healing
• 6.6 Wound Care Decision Tool
• 6.7 Artzberger Hand and Finger Bandaging
• 6.8 Artzberger Foot and Toe Bandaging
• 6.9 Types of Ulcers and Characteristics – Part 1 and Part 2
• 6.10 Photos of Ulcers
Activity 1: Wound Screening

**Handouts**
- 6.1 Instructions for Screening Wounds
- 6.2 Individual Impairment Record Form (IIRF) – Wound Section
- 6.3 Community Wound Care or Referral
- 6.4 Scenarios for Wound Care Screening and Recording

**Equipment & Materials**
- Flip chart stand and paper
- 4 – 6 colored markers
- Copies of 6.2 IIRF – Wound Section, 1 form per pair
- 1 stool or chair to support a leg
- 1 red marker for drawing location of wound
- Pen/pencil

**Instructions for Teaching the Activity**
Room Arrangement: Participants sit in a semicircle with two chairs placed in the front. One chair is for the wound patient. The other chair is for the Health Coach.

1. **Health Coach** distributes handouts 6.1 Instructions for Screening Wounds, 6.2 IIRF-Wound Section, 6.3 Community Wound Care or Referral and 6.4 Scenarios for Wound Care Screening and Recording.

2. **Health Coach** asks for a volunteer, if no patient is available with a wound.

3. **Health Coach** selects one wound care scenario on handout 6.4 Scenarios for Wound Care Screening and Recording and draws wound on volunteer to match the wound care scenario. The scenario details are written on the flip chart.

4. **Health Coach** demonstrates how to do the screen and record the results.

5. **Health Coach** discusses handout 6.3 Community Wound Care or Referral with participants and together they decide what problems were identified in the scenario they observed and what care should be done.

6. **Health Coach** asks participants to count off 1, 2, 3, 4, 5, 6, etc. and repeats to divide the group into pairs.

7. **Health Coach** chooses one wound scenario from handout 6.3 for each pair.

8. The pairs are given 10-15 minutes to complete the screening and recording, and decide what care is needed using handout 6.3.

9. The pairs start by drawing the wound from the scenario on one person in the pair. Then, the pair works together to complete the screening process, recording results and deciding care.

10. Each pair shares their wound scenario, their documentation and care plan with the larger group.

11. **Health Coach** and group provide feedback on the scenario presented by each pair.

*Note: Examiner and participants must remember to wash hands with soap and water before and after screening demonstration.*
Activity 2: Principles and Actions for Wound Healing

Handouts
- 6.5 Principles and Actions to Improve Wound Healing

Equipment & Materials
- Flip chart stand and paper
- 4 – 6 colored markers
- 6 sheets of flip chart paper, 1 piece for each group

Instructions for Teaching the Activity
Room Arrangement: Initially the participants are divided into six groups and then present their work to the large group.

1. Health Coach divides the large group into six groups.

2. Health Coach writes on the flip chart the following six principles for improving wound care and assigns one principle to each of the six groups:
   - Control underlying health conditions and/or diseases
   - Protect the wound and surrounding skin from physical or chemical injury
   - Keep the wound moist (not too wet and not too dry)
   - Keep the wound and surrounding skin clean, remove dead skin and tissues, and treat infection when needed
   - Control or reduce swelling to decrease pain, improve healing and preserve movement
   - Preserve skin and joint movement

3. Health Coach distributes paper and markers to each group.

4. Health Coach explains that each group will discuss their principle and make a list of the actions they would recommend to accomplish this principle. The responses are recorded on paper. The group selects one person to present for the group.

5. Groups are given 10 minutes to complete the task and then all groups join together for each group to present.

6. Health Coach asks which group wants to present first. The paper, with listed actions, is taped up on the wall or on the flip chart.

7. After each group presents, the Health Coach asks other participants if they have additional actions to recommend.

8. After all groups have presented, the Health Coach distributes handout 6.5 Principles and Actions to Improve Wound Healing.

9. The entire group reviews the handout and adds any missing actions on the corresponding flip chart paper.
Activity 3: Steps for Wound Dressing Change and Wound Dressing Dramatization

**Handouts**
- 6.6 Wound Care Decision Tool

**Equipment & Materials**
- 1 copy of 6.2 IIRF – Wound Section forms
- Pen/pencil
- Foot stool
- 1 handwashing kit (basin, cup, bucket of water, soap and paper towels
- 1 wound care kit (waste disposable pad, kidney basin, scissors, forceps)
- Consumable materials for wound care (dressings and bandages)
- 10 gauze compress 10 X 10 cm, clean
- 1 roll of plaster tape (adhesive tape)
- 2 (10 cm) crepe bandages, clean
- 5g cotton wool, clean
- 1 bottle of alcohol
- 4 water sachets
- 4 pairs of disposable gloves, size 7½

**Instructions for Teaching the Activity**

**Room Arrangement:** Participants sit in a semicircle with two chairs and either a stool or another chair at the opening of the semicircle.

1. Health Coach reviews handout 6.6 Wound Care Decision Tool with participants.

2. Health Coach asks participants to watch the dramatization of a wound dressing change. They are informed that the dramatization will be done with many errors. They are advised to observe and note on paper the errors performed during the wound dressing change. The errors identified will be discussed at the end of the dramatization.

3. Health Coach asks for a volunteer to play the role of the “patient.”

4. Health Coach asks participants to review and study handouts as dramatization is being set up.

Set up for dramatization:

5. The Health Coach explains the purpose of the dramatization to the volunteer outside of the classroom and how to play the role of “patient.”

6. Health Coach prepares the “patient”:
   - Draws a wound with a marker on the ankle
   - Covers the wound with a gauze dressing and tape in place

7. The “patient” and Health Coach return to the classroom.

**Dramatization:**

*Note: When dramatization starts, participants can stand closer to the procedure.*

8. Health Coach changes the wound dressing making the following errors:
   - Does not organize materials prior to starting
   - Forgets to wash hands and change gloves
   - Forgets to cover stool before placing “patient’s” leg on it
   - Rips dressing off “patient” causing pain and drops dirty dressing on the floor
   - Leaves the wound open for a long time and contaminates the wound (coughs over the wound, turns back or reaches over the wound when retrieving supplies, writing pen, cell phone)
   - Vigorously scrubs the wound with cotton dipped in alcohol and then throws contaminated cotton on the floor
   - Fans or blows over the clean wound to dry the alcohol
   - Bandages the ankle too tightly with foot pointing down, making it difficult for patient to raise the foot up for walking
   - Forgets to check and exercise ankle motion with and without bandage

9. Health Coach asks the participants what errors they observed.

10. Health Coach emphasizes the importance of allowing the patient to move when the dressing is removed and reminding the patient to frequently move throughout the day.

*Note: Movement is not allowed for approximately 10 days following a skin graft. Talk with the surgeon and confirm when movement can be started again.*
Activity 4: Correct Wound Dressing Simulation

Handouts

• 6.6 Wound Care Decision Tool

Equipment & Materials

• Flip chart stand & paper
• 4 – 6 colored markers
• 1 handwashing kit (basin, cup, bucket of water, soap and paper towels)
• 1 wound care kit (waste disposable pad, kidney basin, scissors, forceps)
• Consumable materials for wound care (dressings and bandages)
• 1 roll of plastic food wrap, clean
• 1 small container of honey for dry or necrotic wound (optional)
• Boiled banana leaf (optional)
• Boiled potato peel (optional)
• Cotton dress cloth, clean
• 10 gauze compress 10 X 10 cm, clean
• 1 roll of plaster tape (adhesive tape)
• 5g cotton wool, clean
• 1 bottle of alcohol
• 4 water sachets
• 4 pairs of disposable gloves, size 7½
• 4 large polyethylene (plastic) bags to cover the floor and stool or chair
• 4 small polyethylene (plastic) bags for contaminated material
• 2 (10cm) rolls of crepe elastic bandages
• 2 (12cm) rolls of crepe elastic bandages

Instructions for Teaching the Activity

Room Arrangement: Participants sit in a semicircle with two chairs and either a stool or another chair at the opening of the semicircle.

1. Health Coach asks the participants for a volunteer to demonstrate good technique when doing the step-by-step dressing change procedures described in handout 6.6.

2. Wound dressing change is done correctly on the same “patient” with help and feedback from the group.

Note: One participant should read out loud handout 6.6 Wound Care Decision Tool.

3. During the dressing procedure, the Health Coach reminds participants of the six basic principles of wound management:
   • Control underlying health conditions and/or diseases
   • Protect the wound and surrounding skin from physical or chemical injury
   • Keep the wound moist (not too wet and not too dry)
   • Keep the wound and surrounding skin clean, remove dead skin and tissues and treat infection when needed
   • Control or reduce swelling to decrease pain, improve healing and preserve movement
   • Preserve skin and joint movement

4. Health Coach checks to see if the bandage wrinkles or is tight at the ankle. If there is a problem, Health Coach corrects the bandaging.

5. Health Coach asks the patient if the bandaging feels more comfortable and allows for ankle movement needed for walking.
Activity 5: Practice Bandaging Hands & Fingers and Feet & Toes

**Handouts**
- 6.7 Artzberger Hand and Finger Bandaging
- 6.8 Artzberger Foot and Toe Bandaging

**Equipment & Materials**
- Flip chart stand and paper
- 4 – 6 colored markers
- 1.5–2cm rolls of crepe elastic bandages (2 rolls per pair)
- 10cm rolls of crepe elastic bandages (2 rolls per pair)
- 12cm rolls of crepe elastic bandages (2 rolls per pair)

**Instructions for Teaching the Activity**

Room Arrangement: Initially participants sit in a semicircle with three chairs at the opening of the semicircle, followed by working separately in pairs.

1. **Health Coach asks for three volunteers. They are seated in front for bandaging demonstration.**

2. **Health Coach distributes handout 6.8 Artzberger Hand and Finger Bandaging and 6.9 Arzberger Foot and Toe Bandaging to participants.**

3. **Health Coach demonstrates correct bandaging techniques for fingers, upper limb (hand and arm) and lower limb (foot and leg).**

4. **During demonstration, Health Coach emphasizes:**
   - Factors affecting bandage pressure
     - Bandage width (a narrower bandage has higher pressure)
     - Bandage overlap (more overlap has higher pressure)
     - Type of wrap (spiral and figure eight)
     - Bandage tension (not too tight)
     - Distance around the limb (narrow wrist/ankle areas vs. arm/leg)
   - Bandaging from bottom to top (finger up arm, toes up leg)
   - Checking if full joint movement can be done when bandaged
   - Fixing the end of the bandage with tape vs. tying a knot

5. **Health Coach divides the group into pairs and distributes three different sizes of bandages (two of each size 0.5–2cm, 10cm, 12cm) to each pair.**

6. **Participants practice bandaging fingers, upper limb (arm/hand) and lower limb (leg/ankle) of their partner.**

7. **Health Coach will observe bandaging and correct as needed.**
Activity 6: Identifying Ulcer Type, Wound Management and Prevention of its Reoccurrence

Handouts
- 6.9 Types of Ulcers and Characteristics – Part 1 and Part 2
- 6.10 Photos of Ulcers

Equipment & Materials
- Flip chart stand and paper
- 4 – 6 colored markers

Instructions for Teaching the Activity
Room Arrangement: Participants sit in a semicircle.

2. Health Coach divides the large group into five small groups and assigns each group a specific type of ulcer. (See table below.)

3. The groups are asked to use the handouts to prepare a five-minute presentation that will be given to the larger group.

4. The groups are given 15–20 minutes to develop their presentation and are encouraged to find creative ways to do the presentation that will help the larger group learn to identify their specific types of ulcer, how to address key issues in wound management and how to prevent its reoccurrence.

5. Each group is given five minutes to present. Allow time at the end of each presentation for questions and clarifications.

### 6.1 Instructions for Screening Wounds

**Preparation for wound screen:**
Gather together equipment and supplies: IIRF-wound section, pen or pencil, soap, clean water, gloves, plastic trash bag for contaminated material, disposable paper towels. Wash hands with soap and water before and after each screen.

For teaching purposes, assume screen begins after dressing has been removed and wound has been cleaned. However, in the community or health center, it is important to assess wound drainage: quantity, color, odor, etc. as you remove each wound dressing. See handout 6.6 Wound Care Decision Tool.

<table>

Handout 6.3: Community Wound Care or Referral

<table>
<thead>
<tr>
<th>Problems Identified with Wounds on Screen*</th>
<th>Community Care</th>
<th>Contact Supervisor and/or Refer for Clinical Exam, Diagnosis or Other</th>
</tr>
</thead>
</table>
| 1. Scars with cracks                       | • Soak and moisturize daily, cover with plastic wrap for 15 minutes.  
• Massage to free the scar.  
• Move and stretch the area affected by the scar.  
• Straighten the scarred area and immobilize until healed.  
• Protect from sun and injury. | If no improvements with good community care in **two weeks**, refer.  
If deep cracking or further loss of motion occurs, refer as soon as possible. |
| 2. Feet with dryness, callus and cracks    | • Soak and moisturize daily, cover with plastic wrap for 15 minutes, then gently scrape/rub.  
• Scrape/rub parallel with line of the crack.  
• Wear socks and footwear. | If dryness and cracks do not improve with good moisturizing practices after **two weeks**, refer. |
| 3. Clawed fingers with dryness, callus and cracks | • Soak and moisturize daily, cover with plastic wrap for 15 minutes then gently scrape/rub.  
• Scrape/rub in parallel with line of the crack.  
• Straighten finger(s) and immobilize, until healed. | If dryness and cracks do not improve with good moisturizing and immobilization practices after **two weeks**, refer. |
| 4. Cracks from wet skin between the fingers, toes or in skin folds | • Wash daily with soap and water.  
• Dry carefully between toes, fingers and in skin folds.  
• Talk to supervisor about use of antiseptic or antifungal cream.  
• Follow clinical treatment instructions. | If not improved within **one week**, refer. |
| 5. Ingrown toenails                        | • Wash feet daily with soap and water.  
• If possible, after washing gently, lift nail edge to prevent more ingrowth.  
• Check that shoe length is not too short. | Refer as soon as possible for clinical exam and excision if needed. |
| 6. Wound(s) to sole of foot                | • Clean well with running clean water or saline solution.  
• Cover to keep clean.  
• Rest and protect from injury.  
• Use walking device, adapted footwear and/or tools.  
• Observe daily. If better, continue. If worse, get help. | If not improved within **one week**, refer. |
| 7. Wound to palm of hand(s) and/or finger(s) | | |
| 8. Wound or injury to other part of body   | | |

*Note: Check vision and mobility to see if it is adequate to do self-care.

The Health Coach will explain and demonstrate how to check person’s ability to see the skin on the bottom of each foot.
• Health Coach draws a number with a black pen on the sole of the foot over bone at the base of the great toe.
• Health Coach asks the person to view the sole of the foot and tell the number they see.
• If unable to see, daily skin checks, foot and toenail care must be done by a helper and/or with the aid of a mirror.
Handout 6.4: Scenarios for Wound Care Screening and Recording

Scenario No. 1: Fisherman
Complaints: Itching and pain
Location of problem: Right and left leg and foot
Problem(s): Dry skin, heel cracks (3), cracks between toes (4)
Duration: One month

Scenario No. 2: Middle-aged mother
Complaints: Too much wound leakage and smell
Location of problem: Left, inside ankle above the bone
Problem(s): Wet wound with no pain or infection; dressing soaked within a couple of hours of dressing change.
Duration: One year

Scenario No. 3: Soccer (futbol) player
Complaints: Pain with movement and at rest (day and night)
Location of problem: Behind right knee
Problem(s): Infected puncture wound with increased local warmth, swelling, pain and bad smell
Duration: One week

Scenario No. 4: Vendor at the market
Complaints: Family and others complain of a bad odor
Location of problem: Bottom of left foot on the bone under the first toe
Problem(s): Infected ulcer on foot with loss of feeling; leakage into footwear and bad odor
Duration: Heals and breaks down repeatedly for the last three years

Scenario No. 5: Young child of 3
Complaints: Crying and screaming with dressing change
Location of problem: Chest and left armpit (hollow under the arm)
Problem(s): Uninfected burn from scalding water
Duration: One week

Scenario No. 6: 10-year-old student
Complaints: Recent bump which opened up into a wound with undermining edges (lifts away from skin and a cotton swab can be placed under the edge)
Location of problem: Inside of right elbow
Problem(s): Nodule that has developed into an uninfected ulcer and has gradually increased in size
Duration: One month

Scenario No. 7: Young mother
Complaints: Too painful to use hand in daily activities and is getting worse
Location of problem: Palm and web space (between thumb and first finger) of left hand
Problem(s): Infected knife cut with increased pain, warmth, swelling and bad odor
Duration: Two weeks
## Handout 6.5: Principles and Actions to Improve Wound Healing

<table>
<thead>
<tr>
<th>Principles</th>
<th>Actions</th>
</tr>
</thead>
</table>
| 1. Control underlying health conditions and/or diseases | • Healthy eating, good personal and environmental hygiene. See handouts 3.2 Good Individual and Household Behaviors and 3.3 Preventive Actions for Healthy Skin and Nails  
• Correct use of disease-specific medications; e.g. antibiotics (leprosy, Buruli ulcer, other), insulin (diabetes), antivirals (HIV)  
• Regular follow-up for chronic (on-going) health conditions (problems) |
| 2. Protect wound and surrounding skin | • Protect from physical (mechanical) injuries:  
  - Removal of wound dressings stuck to the wound  
  - Excessive pressure on the wound during standing, walking, sitting and/or lying  
  - Excessive pressure on the wound from tight bandages  
  - Repeated rubbing from hand tools, footwear, etc.  
• Protect from chemical injuries:  
  - Do not put anything on the wound that you would not put in your eye  
• Protect from dirt and germs (cover the wound)  
• Protect wound and surrounding skin from drying and excessive moisture by sealing with waterproof tape or film top dressing* |
| 3. Keep the wound moist | • Keep the wound moist but not too wet and not too dry  
  - Use appropriate type of moisture-retentive dressing**  
  - Adjust frequency of dressing change as needed |
| 4. Keep the wound and surrounding skin clean, remove dead skin and tissues and treat infection when needed | • Change dressing regularly or as needed:  
  - Gently wash the wound and surrounding skin thoroughly with clean water or saline to remove excess secretions and wound debris (dead skin and tissues)  
  - Gently pat dry the surrounding skin  
  - If wound is infected, seek health worker for antibiotic |
| 5. Control swelling | • Elevate affected part as needed  
• Frequent, gentle active movement of the affected part by the patient  
• Apply light pressure with bandaging starting distally and working upward |
| 6. Preserve skin and joint movement | • Position affected part to prevent contractures  
• Mobilize skin/scars that are sticking to underlying structures  
• Move affected part frequently through full range of motion |

* Examples of waterproof films: tape, adhesive film, unused plastic wrap  
** Examples of moisture-retentive dressing: Vaseline or zinc paste around intact skin which seals a moisture-retentive film top dressing
Step 6: Care for Wounds

Handout 6.6: Wound Care Decision Tool

1. Lay out plastic waste disposal pad.
2. Gently remove old bandages and dressings and put on disposal pad.
3. Gently rinse wound and skin well with clean water or saline solution. Do not scrub.
4. Observe, record wound longest length including undermining, signs of inflammation and/or infection, wound dead tissue or slough, moisture.

5. If need to debride dry wound, apply clean Vaseline, gel or honey to wound, then cover it with a clean moisture-retentive dressing. Seal edges with tape or plastic wrap. Leave on two or more days.

6. Rinse well with clean water/saline. Apply clean moisture-retention dressing to wound surface. Add absorbent outer dressings. Change all dressings immediately if outer dressing/bandage becomes wet. Remember to rinse well with clean water, before recovering.

7. Hold dressings in place with crepe bandage, roll gauze or clean cotton cloth outer bandage. Protect outer bandage from getting wet and contaminated with waterproof outer layer when bathing or if raining.

8. Change the dressing when fluid leaks through it or after three to seven days. Discard or dispose of contaminated materials safely.

9. Refer or get help if there is no improvement after two weeks of care.
Handout 6.7: Artzberger Hand and Finger Bandaging

1. Use tape and hold bandage end at ulnar (lateral) side of wrist, wrap two times around wrist, spreading the bandage.

2. Come up on radial side (outer side) of thumb starting at base and angling up.

3. Do 360° wrap around thumb at base of nail.

4. Continue overlapping 360° wraps to thumb web, end at lateral (ulnar) side of wrist.

5. Wrap around volar side of wrist and angle bandage up to nail bed, between the second and third fingers and do 360° wraps to finger web space, returning to lateral side of wrist.

6. Continue for each finger and end by wrapping the wrist and as far up as needed.
Handout 6.8: Artzberger Foot and Toe Bandaging

1. Use tape and hold bandage end to outside (lateral) side of foot near little toe, wrap two times around foot, spreading the bandage.

2. Come up on radial side (outer side) of big toe starting at base and angling up and around toe at base of nail.

3. Then wrapping at 360° around big toe returning to medial side of foot.

4. Wrap around bottom of foot coming up at an angle from lateral side of foot to the nail bed of the second toe and wrap 360° around toe, returning to medial side of foot.

5. Wrap around bottom of foot coming up at an angle from lateral side of foot to the nail bed of the third toe and wrap 360° around toe, returning to medial side of foot.

6. Continue until all toes have been wrapped and then continue to wrap up the foot.

### Step 6: Care for Wounds

<table>
<thead>
<tr>
<th>Natural History</th>
<th>Venous</th>
<th>Arterial (Ischemic Ulcer)</th>
<th>Pressure</th>
<th>Neurotrophic Diabetes / Leprosy</th>
</tr>
</thead>
<tbody>
<tr>
<td>What happens if not treated</td>
<td>Over 80% of leg ulcers in the USA are venous ulcers. Even if it heals, there is a strong tendency to recurrent ulceration.</td>
<td>Rarely heals without improved arterial supply</td>
<td>Rarely heals on its own</td>
<td>No rest and continued daily activities prevents healing. Remains painless, so often ignored by patient.</td>
</tr>
</tbody>
</table>

#### History

**Helps with diagnosis**

- Feet and legs swell during the day but in the morning after sleeping the swelling is less.
- Pain when legs and feet are up and is less when feet are down.
- Foot/feet feel cold.
- Person has difficulty changing positions, staying for long periods of time in one place without moving.
- May report difficulty feeling and therefore does not feel the need to change positions.
- Person states they didn’t feel the injury, they don’t know how it happened.
- Sometimes associated with foreign body trauma (nail, rock, nylon tread, burn, etc.).

#### Treatment

- **Wound care**
  - Elevation
  - Compression
  - Arterial surgery
  - Maintain the head higher than legs and feet.
  - Strict routine to relieve continuous pressure (pillows, towels, foam rolls, positional change, etc.).
  - Enforced rest and protection of limb.

#### Prevention

- Elevate legs
- Use compression (stockings, bandages) during the day but remove at night.
- Deep “belly breathing” plus MEM
- Walking
- Calf and ankle exercises

Handout 6.9: Types of Ulcers and Characteristics – Part 2

<table>
<thead>
<tr>
<th></th>
<th>Buruli Ulcer</th>
<th>Tropical Ulcer</th>
<th>Malignancy</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Cause</strong></td>
<td><em>M. ulcerans</em> infection, which produces a necrotizing toxin, called mycolactone&lt;br&gt;Person must have visited or lived in an endemic area</td>
<td>Bacterial infection (non-specific)&lt;br&gt;Small skin wounds allow entry of organisms</td>
<td>Squamous cell carcinoma can develop in chronic wounds&lt;br&gt;Other malignant tumors are not associated with ulcers</td>
</tr>
<tr>
<td><strong>Location</strong></td>
<td>Lower limbs (60%)&lt;br&gt;Upper limbs (30%)&lt;br&gt;Other sites (10%) such as trunk, face</td>
<td>Most often on lower limb (mostly around ankles)&lt;br&gt;Sometimes on thighs and arms</td>
<td>In a chronic wound, anywhere on the body</td>
</tr>
<tr>
<td><strong>Appearance</strong></td>
<td>Ulcer with undermined edge&lt;br&gt;Edema around the ulcer&lt;br&gt;Location of wound is other than lower limb</td>
<td>Regular round/oval shape with clearly defined borders/edge&lt;br&gt;Not significantly undermined edge&lt;br&gt;Edema around the ulcer with dark pigmentation</td>
<td>Often a recently appearing cauliflower-like mass, growing out of the wound surface; may bleed easily</td>
</tr>
<tr>
<td><strong>Pain</strong></td>
<td>Little or no pain unless there is secondary infection</td>
<td>Painful in acute phase&lt;br&gt;Less pain in chronic phase</td>
<td>Initially, there is no pain</td>
</tr>
<tr>
<td><strong>Other Features</strong></td>
<td>More common in children&lt;br&gt;Osteomyelitis</td>
<td>More common in children, teenagers and women</td>
<td>The underlying ulcer will usually have been present, off and on, for more than 10 years</td>
</tr>
<tr>
<td><strong>Natural history</strong></td>
<td>Can become very large&lt;br&gt;Heals eventually with severe scarring and skin contracture, which may limit movement</td>
<td>Size is limited by immune response&lt;br&gt;May heal if general health is good</td>
<td>Slowly progressive malignancy, spreading to local lymph nodes and then to other parts of the body</td>
</tr>
<tr>
<td><strong>History</strong></td>
<td>Lives in or has visited an endemic area&lt;br&gt;Starts as a small lesion (nodule or plaque) but can lead to an extensive ulcer&lt;br&gt;May also start as an edema (swelling of the limbs)</td>
<td>Lives in or has visited tropical rural areas&lt;br&gt;Small traumatic wounds to lower limbs exposed to mud or contaminated water&lt;br&gt;Starts as a pustule; when this ruptures there is foul-smelling, blood-stained pus</td>
<td>History of long-standing chronic ulcer (greater than 10 years)</td>
</tr>
